ACTION

Procure, with our partners, only zero emission buses from 2025.

The City of Austin works closely with Capital Metro, the transit service provider responsible for operating the local public transportation system. Three Austin City Council members serve on their Board of Directors. Capital Metro plans to replace 40 existing buses with Electric Transit Buses between 2022 and 2024. Thus far, they have purchased

8 light-duty sedan all-electric fleet vehicles for staff fleet and installed charging infrastructure for staff and fleet vehicles. In 2020, they plan to purchase 10 electric buses, and in 2024, 40 more electric buses. In 2021, they will make changes to their North Operations Bus Depot enabling it to charge up to 180 electric buses.

Ensure that a major area of our city is zero emission by 2030.

in Austin that are effectively zero emissions zone, and other areas are currently being planned, including:

Multiple districts currently exist

Current

• Ann & Roy Butler Hike and Bike Trail (10 miles of linear car-free trails/open space)

 Seaholm EcoDistrict Pedestrian Plaza

 University of Texas Mall & Museum District

 Mueller Neighborhood Community Greenspace

Planned

 Capitol Complex Texas Mall. Three full city blocks are being closed to automobile traffic and the public ROW is being decommissioned to create a large urban pedestrian

area which will connect to the Texas State Capitol Mall at one end and the UT Museum District at the other end. Construction underway, complete by June 2022.

• Waterloo Greenway a 1.5 mile car-free corridor that will provide 35 acres of pedestrian/bike space through the heart of the city.

We will work with C40 cities to increase our level of ambition for zero emission areas in 2030; considering how these existing districts and pedestrian areas are connected to transit nodes, and facilities for people choosing to cycle or walk to and within the area. We will consider plans to coordinate/regulate freight deliveries including plans to make freight deliveries zero emission, as well as explore additional measures to prioritise parking for EVs or shared vehicles.

OTHER SUPPORTIVE ACTIONS

Transform our cities through people-friendly planning policies.

The City of Austin's Great Streets Masterplan is implemented across downtown to transform the public ROW into great public pedestrian spaces. Amenities include transit stops, benches, planters, street trees, public art and sidewalk cafes. Costs are shared between private developers and the City.

The current rewrite of the City's Land Development code is expected to provide new tools for improving the pedestrian environment, including adopting a new commercial landscape code incentivizing innovative ways to green high density pedestrian zones.

The Austin Strategic Mobility Plan

transportation network and promotes the safe systems approach

Increase the rates of walking, cvcling and the use of public and shared transport that is accessible to all citizens.

The Austin City Council recently adopted the Austin Strategic Mobility Plan with a goal of 50/50 mode share by 2039, where 50% of people walk, bike, take transit or any other non-drive-alone mode to get to work. The current percentage is 24%, so this is an ambitious increase which might be achieved through planned actions including: investing in high capacity transit, making streets safer for bicycling, completing the sidewalk system, providing high quality urban trails, and supporting shared and alternative modes.

Reduce the number of polluting vehicles on our streets and transition away from vehicles powered by fossil fuels.

The City's Plug-In Everywhere program provides rebates for electric vehicle charging stations and e-bike purchases, incentives to auto dealers for selling EVs, and launched an electric pedi-cab pilot program. Austin Energy operates over 800 publicly accessible EV charging ports across the City with an affordable subscription program that powers EV recharging with renewable power. As part of the upcoming Community Climate Plan update, the City will be developing a community-wide EV plan

defines the foundations of a safe

of Vision Zero throughout the plan. It also includes key actions, indicators, and targets intended to shape future initiatives of the Vision Zero program. It includes multiple actions intended to create a Culture of Safety, Design for Safety and create Safe Behaviors.

The City works diligently to advance safe walking and cycling through Safe Routes to Schools, Safe Routes to Markets, and Vision Zero pedestrian deaths.

The City's anti-idling ordinance reduces ground-level ozone and other air pollutants, helping to protect public health especially for pedestrians and cyclists.

Through significant routing and system changes for the redesign of the transit system by Cap Metro, public transit ridership was recently increased by 4.8% over a one year period.

Austin Transportation Dpt. has worked diligently to embrace dockless scooters and bikes which can provide important first and last mile options, by providing a consistent regulatory framework to help ensure access, fairness and safety.

C40

Lead by example by procuring zero emission vehicles for our city fleets as quickly as possible.

The City of Austin adopted a Fleet Electrification Plan goal to purchase 376 EVs over a 3-year period, and is a participant in the Climate Mayors Electric Vehicle (EV) Purchasing Collaborative.

Fleet progress to date:

EVs currently in Service: 58
PHEVs currently in Service: 79
EV / PHEV to be in service by end of 2019: 201
EV / PHEV by the end of 2020: 330 As the market evolves, we hope to begin purchasing EV/PHEV light and heavy duty fleet vehicles. In addition to publicly available charging stations, the City operates an additional 33 City fleet EV charging stations with more in planning.

City of Austin operates its own em-

ployee Smart Trip Rewards program

incentivizing alternative commute

modes for staff. On request, staff are

provided with annual transit passes.

Collaborate with suppliers, fleet operators and businesses to accelerate the shift to zero emissions vehicles and reduce vehicle miles in our cities. As 1 of 6 projects in Austin's American Cities Climate Challenge, we are currently implementing an EV Dealership Campaign to address barriers to EV purchasing, which includes a comprehensive campaign to engage buyers and local auto dealerships as champions of the EV revolution, with the goal of making Austin a leader in EV sales.

We partner with Movability Austin to work directly with 65 major Austin employers, particularly in the downtown area, to implement Commute Trip Reduction programs by joining this nonprofit transportation management association, which works across a 6-county area to address regional mobility challenges. Options include transit pass reimbursement, free shuttles, and bicycle amenities.

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT

• A significant portion of the City's 2016 \$720 million mobility bond is geared towards funding sidewalks, Safe Routes to Schools, Urban Trails, Bikeways, and Safety/Vision Zero

ACTION

Procure, with our partners, only zero emission buses from 2025.

All new buses procured in our city will be zero emissions from 2025.

Ensure that a major area of our city is zero emission by 2030.

2017-2020 the most polluting cars will be banned from entering a new LEZ that covers the entire city from 2020 (most polluting refers to any cars below Euro 3 or diesel cars below Euro 4).

As part of our Pollution Action Plan

Restrictions to the most polluting vehicles will be progressively applied from 2017 onwards, starting on high level pollution events.

Moreover, no diesel taxis will be licensed from 2019 and by 2024 there should be no remaining diesel taxis in the metropolitan area.

More information regarding anti air-pollution measures can be found <u>here</u>.

We are currently designing a new mobility plan that will strengthen the existing anti-pollution measures, and will be a major step forward for our sustainability policies.

OTHER SUPPORTIVE ACTIONS

Transform our cities through people-friendly planning policies.

public space for peo Increase the rates of walking, cycling and the use of public and

Reduce the number of polluting vehicles on our streets and begin the transition away from vehicles powered by fossil fuels.

shared transport that is accessible

to all citizens.

Lead by example by procuring zero emission vehicles for our city fleets as quickly as possible.

Collaborate with suppliers, fleet operators and businesses to accelerate the shift to zero emissions vehicles and reduce vehicle miles in our cities.

Municipal fleets are renewed towards vehicles.

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT

To make this vision a reality the City Council has committed €1.5 million over the next two years for the implementation of the LEZ zone. • In Barcelona 2018 budget, more than 175 million euros will be invested in improving public and sustainable transport.

The city is implementing the gov- ernment measure called " <u>fill streets</u> <u>with life</u> ." It is deploying a new mod- el of superblocks, improving walk- ability, cyclability and allocation of public space for people.	
The current government is invest- ing more than ever in walking and cycling. The cycling network will be doubled from the current 152km of network to 308km in 2019 in Barce- lona city.	A complete information regarding our cycling strategy can be found <u>here</u> . And the cycling strategy can be found <u>here</u> .
Further to a general reduction of 21% of vehicles according to the Urban Mobility Plan 2013-2019, restrictions to the most polluting vehicles will be progressively applied from 2017 on- wards initially during high pollution events. By 2020 the restriction will be permanent within the boundar- ies of the LEZ and extended to the	metropolitan area by 2025. In 2030 only zero emission vehicles will be permitted in the city centre. We will also continue our supporting policies for electric vehicle through <u>LIVE public-private initiative</u> .
Municipal fleets are being currently renewed towards lower emissions vehicles.	The current split is zero emission vehicles 16.4%, Hybrid 2.1% and bio- diesel 13.4%.
Working with other stakeholders including acting administrations and operators to stimulate demand for the cleanest vehicles. This work includes a public-private platform (LIVE) open to all those entities in- volved in sustainable mobility, main- ly electric and CNG vehicles, with the shared goal of developing proj- ects, policies, strategies, new busi- ness models and creating a knowl- edge network	We also provide fiscal and regulato- ry incentives to substitute pollutant private cars for public transporta- tion and zero emission vehicles.

Procure, with our partners, only zero emission buses from 2025.

ACTION

Berlin's Mobility Act is aimed at ensuring that all vehicles used in public transport will be zero emissions at tailpipe by 2030 at the latest. For bus transport, this will be done in part by switching to electrically operated, rail-bound transport (tram and subway) in the case of high-traffic bus lines. However, since only part of the bus traffic will be replaced by trams and subway trains, the main focus is on using vehicles powered by alternative fuels or non-fossil fuels.

In the period covered by the current 'Local Public Transport Plan 2019-2023,' the State of Berlin will create the framework conditions for starting a substantial and continuous conversion of our bus traffic from fossil fuels to non-fossil fuels. In order to gain experience with the operation of electric buses in the context of what Berlin's bus system requires, the BVG will test depot charging, end-of-line charging, and on-vehicle battery-charging during the period covered by the current Local Public Transport Plan.

Procure, with our partners, only zero emission buses from 2025.

Berlin's Mobility Act stipulates the promotion of ecomobility and its priority over motorized private transport. A comprehensive package of measures will greatly expand public transport, cycling infrastructure, and pedestrian traffic. This should gradually reduce car traffic especially in inner city areas. If cars are still needed, they should, if possible, be electric. This choice is also being supported by the State of Berlin with a series of measures.

OTHER SUPPORTIVE ACTIONS

Transform our cities through people-friendly planning policies.

Increase the rates of walking, cycling and the use of public and shared transport that is accessible to all citizens.

Reduce the number of polluting vehicles on our streets and transition away from vehicles powered by fossil fuels.

All plans and initiatives in the field of mobility and transport are aimed at meeting people's mobility needs as safely and accessibly as possible and in a way that is compatible with urban, environmental, social, and cli- mate aspects. The climate and envi- ronmental impact of transportation should be reduced by clearly priori- tizing ecomobility and by using en- vironmentally friendly technologies. Transportation and transport infra- structure are to be resource-saving and sustainable. At the same time, traffic-related impairment of health is to be avoided, in particular with regard to air and noise pollution. Last but not least is the shared goal 'Vision Zero' - the idea that no traf- fic accidents causing serious per- sonal injury should occur in the city of Berlin.	Important mobility plans and pro- grams: • Urban Development Plan: Mobility and Transport • Local Public Transport Plan • Cycling Plan • Pedestrian Plan • Integrated Economic Transport Concept • Clean Air Plan • Noise Action Plan • Berlin's Energy and Climate Pro- gram
The current draft of the 'Urban De- velopment Plan: Mobility and Trans- port' (not yet adopted) pursues the goal of increasing ecomobility's share of the modal split of passen- ger transport to 77% by 2030 city- wide.	Public transport's share of the mod- al split at citywide level is expected to rise to 29% in order to open up new passenger potential (compared to 26% in 2013). Cycling's share of the modal split is expected to increase to 18% for the entire city (compared to 13% in 2013).
In addition to the goal of public transport being powered by alter- native fuels by 2030 at the latest, a number of other measures are aimed at promoting electromobility. These include: • Construction of charging facili- ties in public areas as an important prerequisite to a successful market ramp-up of electric vehicles. An im- portant milestone was the first Eu- rope-wide tender in Germany for the construction and operation of charging facilities for electric vehi- cles.	 Around 490 charging points (including 22 fast charging stations) had been built by the end of September 2018. Expansion to over 1,100 AC and 40 DC charging points is planned for mid-2020. As part of the 'ElMobilBerlin' research project, up to 1,000 street-light charging stations will be installed and tested in public spaces from January 2019 to September 2020. Electrification of commercial fleets is being promoted with the 'Business-related electromobility' sup-

• Incentive program to promote the conversion of sightseeing buses.

port program.

Lead by example by procuring zero emission vehicles for our city fleets as quickly as possible.	Within the framework of the BEK (Berlin's Energy and Climate Pro- gram) 2030, the possibility of using electric and hydrogen vehicles to completely convert the city fleet to sustainably powered systems is being examined. Under the BEK 2030, the conversion will also be put into practice and supported with appropriate pilot and demon- stration projects:	 Gradual conversion of the municipal fleets, such as BSR vehicles (garbage trucks) and the vehicle fleets used by the police, regulatory agencies, forestry offices, road and green space offices, and the fire department. Gradual conversion of the internal administrative fleet and official vehicles in order to lead by example. 	
Collaborate with suppliers, fleet operators and businesses to accel- erate the shift to zero emissions ve- hicles and reduce vehicle miles in	The support program 'Business-re- lated electromobility' will expedite the electrification of commercial vehicle fleets with:	• Incentives for KMU (small and me- dium-sized businesses) to switch to electrically powered vehicles	
our cities.	 Comprehensive advisory services and grants 	• Promotion of cars, trucks, charging infrastructure	

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT

Förderprogramm "Wirtschaftsnahe Elektromobilität" in Höhe von: 3 Mio. € (2019)
 KoMoDo-Förderung in Höhe von: ca. 480.000 Euro vom BMU
 Lastenrad-Förderprogramm in Höhe von 500.000 Euro (2019)
 Projekt FlotteKommunal (Lastenradsharing) in Höhe von 140.000 Euro '

Business-related electromobility' support program: €3 million (2019)

FOSSIL-FUEL-FREE STREETS COMMITMENT	ACTION	
Procure, with our partners, only zero emission buses from 2025.	The City of Birmingham and Trans- port for the West Midlands commit to work with bus operators and to	• Implement the West Midlands Low Emission Bus Delivery Plan
	transition to only zero emission bus- es from 2025. To achieve this we will:	 Pilot zero emission buses on different corridors
	• Work with bus operators and other committed cities towards the advancement in zero emis-	• Deliver the Hydrogen bus proj- ect
	sion technology.	 Implement the SPRINT bus rap- id transit network
Ensure that a major area of our city is zero emission by 2030.	•Use the powers in the UK Bus Ser- vices Act to implement local air quality improvements	• The city is committed to ensure a major are of our city is zero emission by 2030.
	• The Council plans to introduce a Clean Air Zone. This is supported by investment into low emission vehi- cle charging infrastructure and the take up of ULEV fleets by SMEs and Taxi drivers.	

Transform our cities through people-friendly planning policies.

Reduce the number of polluting vehicles on our streets and transition away from vehicles powered by fossil fuels.

Increase the rates of walking, cy-

cling and the use of public and

shared transport that is accessible

to all citizens.

Lead by example by procuring zero emission vehicles for our city fleets as quickly as possible.

Collaborate with suppliers, fleet Birmingham City Co operators and businesses to accelerate the shift to zero emissions vehicles and reduce vehicle miles in our cities.

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT

• The delivery of these commitments will be achieved from a range of both public and private funding. The Council and Transport for the West Midlands will continue to identify and secure funding to deliver these priorities.

The Birmingham Development Plan sets out the vision for the city to be an enterprising, innovative and green City. The plan seeks to ensure Birmingham's residents will expe- rience a good quality of life, living within attractive and well-designed sustainable neighbourhoods. A new Design Guide Supplementary Planning Document (SPD) is being developed to assess and guide the design of all new development plac- ing significant emphasis on creating places for people.	The City's Transport Strategy Bir- mingham Connected sets out a vi- sion to create a transport system for everyone; one that puts people first, and delivers better connections for citizens and businesses.
Our Vision is to make cycling an ev- eryday way to travel in Birmingham over the next 20 years. We want 5% of all trips in the city to be made by bike by 2023 and to double this again to 10% by 2033. This will help to make our city healthier, greener, safer and less congested.	The City Council and Transport for the West Midlands are working to improve our public transport system and cycling and walking infrastruc- ture, which will see people choose to use public transport, cycle or walk rather than their own vehicles for more journeys.
The Council plans to introduce a Clean Air Zone. This is supported by investment into low emission vehi-	cle charging infrastructure and the take up of ULEV fleets by SMEs and Taxi drivers.
Fleet replacement strategies have been developed across all service areas, alongside the development with Corporate Procurement Ser- vices of a vehicle 'hire and lease'	framework to enable the ease of ve- hicle replacement in line with flexi- bility for service needs and cost ef- ficiencies.
Birmingham City Council has creat- ed a toolkit to support the develop- ment and implementation of Deliv- ery and Servicing Plans (DSPs) by businesses and organisations oper-	ating in Birmingham. As part of the wider Brum Breathes programme we will continue to sup- port business to move to cleaner ve- hicles.

the City has pro- of electric buses luced into service D18 at the latest	

Procure, with our partners, only zero emission buses from 2025.

From 2019, all new buses procured in Copenhagen will be zero emission vehicles. This was decided by the city council, on September 2016, as a part of the annual city budget.

ACTION

Ensure that a major area of our city is zero emission by 2030.

Copenhagen will be carbon neutral in 2025, a set in the CPH 2025 Climate Plan. Carbon emissions have so far been reduced by 50% since 1995.

85% of the city-owned cars are already zero emission and about 1.000 shared electric cars are available to the public. 517 public chargers are installed throughout the city.

In August 2017, the City decided to investigate the establishment of one of three possible car free areas. In addition, the City Council decided in October 2017, that the city should investigate a model for banning diesel cars in the city center.

OTHER SUPPORTIVE ACTIONS

Transform our cities through people-friendly planning policies.

Increase the rates of walking, cycling and the use of public and shared transport that is accessible to all citizens.

The City of Copen Reduce the number of polluting vehicles on our streets and begin the reduce the modal s transition away from vehicles powfic. The goal is, that ered by fossil fuels. of the trips in the by car, minimum 33

Lead by example by procuring zero emission vehicles for our city fleets as quickly as possible.

Collaborate with suppliers, fleet operators and businesses to accelerate the shift to zero emissions vehicles and reduce vehicle miles in our cities.

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT

• The City of Copenhagen has decided for a 100% zero emission bus fleet. All new buses procured from 2019 and onwards are zero emissions. In 2031 at the latest, 100% of the bus fleet in Copenhagen is zero emission. This was decided by the city council on September 2016, as a part of the annual city budget.

When planning in Copenhagen we look into the identity of the neigh- bourhood, securing places for peo- ple to meet as well as making con- nections to other neighbourhoods, thus strengthening the social sus- tainability of the city.	Green planning of new development areas are crucial. Recently city coun- cil has decided to build a new park in Urban Development area 'Nord- havn'. The City of Copenhagen has approved a new architectural policy and decided a plan to plant 100.000 new trees in Copenhagen.
Since 2004, Copenhagen has invested about 2 billion DKK in bicycle infrastructure. There are now 469 km of bike lanes in Copenhagen. As a consequence, 35% of all driven trips to, from and in Copenhagen are by bike. People living in, rather than commuting to, Copenhagen use bikes much more – 62% of all trips by Copenhageners to and from work and education are by bike.	Copenhagen has a walking strate- gy, <i>More Walks More</i> , which assures good urban paths and interesting urban spaces in the built environ- ment to facilitate more walking.
The City of Copenhagen works to reduce the modal share of car traf- fic. The goal is, that maximum 33% of the trips in the municipality are by car, minimum 33% by bike, and minimum 33% by public transport. Low emission zones have been in- troduced in 2007, excluding the old- est heavy vehicles, with subsequent tightening.	Citizens with the most polluting vehicles, pay more for parking in their own street. Energy class C or worse pay more than 10 times more than electric vehicles.
All city-owned cars are zero emis- sions in 2025. Today 85% are zero emission. 100% of the vehicles that are not cars (e.g. trucks) will use al-	ternative fuels (biogas, Hydro-treat- ed Vegetable Oil biodiesel etc.) in 2025.
Cooperation with car sharing com- panies on introducing electric vehi- cles in their fleets. Trial of electric buses in close coop- eration between the city, the opera- tor, the manufacturer, and local pub- lic transport authority.	The city supports the work by the suppliers of mobility solutions on developing a MaaS-partnership (mobility as a service).

FOSSIL-FUEL-FREE STREETS COMMITMENT

ACTION

Procure, with our partners, only zero emission buses from 2025.

Transport for Greater Manchester (TfGM) is working with bus operators to develop a roadmap to achieve an emissions-free bus fleet, with the commitment of transitioning to zero

emission buses from 2025. We have recently bid for funding to increase the uptake of ULEB on three high profile services.

Ensure that a major area of our city is zero emission by 2030.

Greater Manchester (GM) is developing a Clean Air Plan for the city region. It will strengthen our existing Low-Emission Strategy and Air Quality Action Plan. The options that will form GM's Clean Air Plan are, at the time of writing, undetermined. The measures that are under consideration include: introduction of Clean Air Zones; retrofit/upgrade of public transport and local authority fleets; electric vehicle incentivisation; Taxi and Private Hire sector support; and cycling and walking improvements. Further details will be available in early 2019.

OTHER SUPPORTIVE ACTIONS

Transform our cities through people-friendly planning policies.

GM's Spatial Framework is designed to ensure GM has the right land and infrastructure available to deliver the homes and jobs required over the next 20 years. The Framework will ensure brownfield sites and

town centres, which are already well connected to established public transport networks, are maximised.

Increase the rates of walking, cycling and the use of public and shared transport that is accessible to all citizens.

Reduce the number of polluting vehicles on our streets and transition away from vehicles powered by fossil fuels.

Most GM local authorities have incorporated zero emission vehicles into their fleets, e.g. Salford City Council's "Co- Wheels" car club model for all staff, which uses a high number of low and zero emission vehicles.
an EV Charging The Network in- eaded posts and r units. The Net- d, with just under harging sessions onth and an aver- mbers joining per	 An expansion of the Network is now planned, including at least 24 dual point rapid chargers by Sep- tember 2019. GM will launch a large scale busi- ness engagement programme in Autumn 2018 to support business- es in encouraging staff to switch to electric vehicles.

ACTION

Procure, with our partners, only zero emission buses from 2025.

Now, in total 71 buses are in operation in Heidelberg. The public transport enterprise RNV owns 37 of these buses and the local council has set a timeline for the replacement of these buses. 11 Euro VI buses are already in operation. Hydrogen-driven buses shall replace all buses (in total 37, starting with the oldest), as soon as these systems have a secured availability.

Additionally, from 2019 a new electrical bus line will be commissioned to improve the public transport system in the historic city centre. This model will have a positive impact on private bus companies and the administration will continuously engage them to procure zero-emission buses.

Ensure that a major area of our city is zero emission by 2030.

A significant part of the old-town (1, 45 km² constructed area) is already now a pedestrian area. The administration is developing concepts to additionally reduce the emissions by freight-transport to and from shops and restaurants.

Currently under consideration is the new city district Patrick-Henry Village that will be developed as a zero-emission district from 2020 (0,97 km² constructed area).

OTHER SUPPORTIVE ACTIONS

Via a job-ticket, businesses (and the city administration) support their staff financially when purchasing a season ticket for the public transport system.

The municipal administration is collaborating with different suppliers of light-duty vehicles.

The city financially supports citizens when replacing a fossil-fuel car by an electric or hydrogen driven car, or when citizens decide to stop having their own car.

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT (CAN BE FOR ALL OR ONE OF THE MAIN OR SUPPORTIVE ACTIONS ABOVE)

• Heidelberg, together with the neighbouring cities Ludwigshafen and Mannheim, applied successfully for the federal subsidy-program "Masterplan Green City". Goal of this masterplan is to bundle financial and human resources to improve the air quality in the metropolitan region. The following five key aspects will be introduced in each of the three cities in strong cooperation with the other cities:

Fossil-Fuel-Free Streets Declaration Press Conference

Procure, with our partners, only zero emission buses from 2025.

The City and County of Honolulu has started implementation of a fleet replacement plan to achieve the Mayor's goal of a 100% renewable-fueled fleet by 2035, and 100% renewable public and private ground transportation city-wide by 2045. This goal will include 100% zero emission bus (100% battery electric or hydrogen fuel cell) procurements as an interim goal by 2025. The City has already obligated funds to begin acquisition of battery electric buses.

ACTION

Ensure that a major area of our city is zero emission by 2030.

explore the potential to decarbonize a specific area of the city such as Waikiki as part of the path to a 100% renewable ground transportation goal by 2045. In addition, the City is developing an approach to work towards de-carbonization of a large swath of the City around a "Carbon-Free Corridor" along the City new automated, 100% electric and elevated 20-mile rail system currently being built. The City will provide incentives for accelerated

The City and County of Honolulu will

zero-emission transportation and mobility development within the Carbon-Free Corridor by implementing a plan to transform land use and last-mile transportation, to minimize VMTs and maximize access to new clean, affordable, and sustainable mobility options. This will be supported by a suite of incentives enforced through ordinance or other means, and backed up by our own taxpayer-financed infrastructure investments.

OTHER SUPPORTIVE ACTIONS

Transform our cities through people-friendly planning policies.

Increase the rates of walking, cycling and the use of public and shared transport that is accessible to all citizens.

Reduce the number of polluting vehicles on our streets and transition away from vehicles powered by fossil fuels.

Lead by example by procuring zero In 2018, the City first electric bus de emission vehicles for our city fleets test design, route, as quickly as possible.

Collaborate with suppliers, fleet operators and businesses to accelerate the shift to zero emissions vehicles and reduce vehicle miles in our cities.

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT

• The Administration secured \$35 million in its fiscal year 2019 budget for the first large-scale purchases of battery electric buses and charging infrastructure.

The City's Department of Planning and Permitting, Department of Transportation Services, and Office of Climate Change, Sustainability and Resiliency are implementing a recently passed "Complete Streets"	policy and transit-oriented develop- ment. The City is also developing a resilience strategy with comprehen- sive community engagement and outreach as a key feature.
The City is implementing "Complete Streets" and transit-oriented de- velopment in its Carbon-Free Cor- ridor with enhanced new mobility with "tactical urbanist" installations. The City is convening an inter-de- partmental "new mobility" working	group to address issues arising from new active mobility options, fleet and system transformation, e.g., curb management, revenue replacement for forgone parking fees and gas tax- es, and infrastructure funding.
In support of the Mayor's goal an- nounced in 2017 to achieve a 100% renewable-powered fleet by 2035 and 100% renewable public and private ground transportation city- wide by 2045; the City is implement- ing a transportation transformation plan that includes a new rail system, transit-oriented development, a ho- listic city-wide system analysis, and	a fleet replacement plan. The City is working closely with the electric utility and other stakeholders to ensure sufficient and appropriate- ly-sited electric vehicle charging infrastructure to support our 100% renewable transportation goals.
In 2018, the City completed its first electric bus demonstration to test design, route, rate, and energy charging regimes in support of our 2035 100% renewable fleet goal.	Later in 2018, the City secured funds from our City Council for the first large-scale procurement of battery electric buses and EV charging in- frastructure.
The Department of Transportation Services, in partnership with the lo- cal electric utility secured a Feder- al LoNo grant to implement a city- wide electric bus test. The City is a member of the Drive Electric Hawaii coalition to stimulate private mar- ket adoption and supporting poli- cies of EVs. The Carbon-Free Tran- sit Corridor will minimize VMTs and maximize access to clean, afford- able, and sustainable new mobili- ty options. The City is developing	"Complete Streets" and has recently installed over 2 miles of new pro- tected bike lanes, 46 miles of bike paths, 59 miles of bike lanes, and 40 miles of bike routes. In June 2017, the City facilitated the launch of one of the fastest-growing bikeshare systems in the nation. The "Biki" bikeshare has over 100 docking sta- tions throughout the primary urban core and will soon be expanded with an additional 40 docking stations.

ACTION

Procure, with our partners, only zero emission buses from 2025.

Transjakarta is currently conducting a pilot with 10 electric buses.

Together with the Jakarta Provincial Government, Transjakarta has set the target of delivering the first 100 electric buses on chosen existing routes by the end of 2020. The target is to have 50% of its fleet electric by 2025.

Ensure that a major area of our city is zero emission by 2030.

As part of Jakarta's Air Quality improvement plan, Jakarta will start planning for the implementation of the first two low emission zones with a study and pilot targeted to be completed in 2021 and further strengthened by Regional Bylaw in 2022.

Jakarta will accelerate implementation of 'push' policies which includes expansion of odd-even traffic restrictions, increased parking fees in areas well-served by public transport and congestion pricing. Regulations for these two actions will be in place by 2020.

OTHER SUPPORTIVE ACTIONS

Transform our cities through people-friendly planning policies.

Increase the rates of walking, cycling and the use of public and shared transport that is accessible to all citizens.

The city has an age Reduce the number of polluting vevehicles (maximum hicles on our streets and transition away from vehicles powered by with full implementa it by 2025. The rele should be in place b

tors to shift their vehicle fleets to wards zero emission (i.e. BlueBird taxi operator)

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT

• The 2019 budget of the capital city allocated \$33.3 million to renovate sidewalks in the downtown core

Jakarta is building 200 parks and planting 2,000,000 pollutant-ab- sorbing plants by 2022. For the first time in history, the city applies par- ticipatory planning in building the parks. There is a target for more than 50 parks to be completed ev- ery year after successful pilot proj- ects that received active participa- tion from residents in 2018.	The city also promotes participa- tion from the residents to achieve the 2,000,000 plants target by pro- viding free plant seeds and orga- nize mass planting events. Recently, the Governor himself participated in a 100,000 Bouganvillea plant- ing event which was followed by tree planting in 100 public schools across the city.
To expand pedestrian space, Jakar- ta has allocated funding to renovate the sidewalks in downtown, with the goal of 2,600 km of Jakarta's sur- face streets for pedestrians. The city is increasing the coverage area of Jakarta's park and ride pro- gram, including adding 5 more lo- cations in entry points from neigh- bouring municipalities in Greater Jakarta. Jakarta's first Light Rail Transit sys- tem will begin operation in 2019, covering 5.8 km and 6 stations.	Following the launch of the city's first metro system (MRT) in March 2019, covering 13 stations on a 15.7 Km route, Jakarta will focus on ex- tending the route by 7.8 km as part of its second phase, expected to be completed in 2024. Integrating Jakarta's MRT (Metro) with other bus services, Transjakarta has already integrated services from small and medium bus operators and the LRT.
The city has an age limit for private vehicles (maximum of 10 years), with full implementation of this lim- it by 2025. The relevant regulation should be in place by 2020.	The city will limit the age of public buses under the Jak Lingko (smart- card) network to a maximum of 10 years by 2020.
The city is going to create an inven- tory for the number of diesel-en- gined buses and operational cars in the municipal fleet. The purpose of the inventory is to plan the replace- ment of the diesel engined buses	and operational cars in the munic- ipal fleet with more sustainable models.
The city will work with taxi opera- tors to shift their vehicle fleets to-

ered by fossil fuels.

Collaborate with suppliers, fleet operators and businesses to accelerate the shift to zero emissions vehicles and reduce vehicle miles in our cities.

All taxis and Private Hire Vehicles will be zero emission capable by 2033

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT

• To make this vision a reality the Mayor has secured £875 million in the Transport for London business plan over the next five years. This includes more than £300 million to transform the London bus fleet, ensuring it meets the tightest possible emission standards (Euro VI) by 2020 as it transitions to a zero emission fleet by 2037.

London continues to develop flag- ship walking and cycling schemes as well as adopting of the Healthy Streets Approach which puts peo- ple at the centre of city planning and street design, not cars.	
Every day, around 6.5 million trips are made solely on foot and around 600,000 trips entirely by cycle but we want to go further. By 2041 the Mayor wants 80 per cent of all jour- neys in London to be made by walk- ing, cycling or public transport, up	from about 64 per cent today. There is record investment in walking and cycling to make this a reality.
The T-charge in London will discour- age the most polluting cars from entering central London from Oc- tober 2017. The Ultra Low Emission Zone comes into effect in 2019, and then expands to cover larger areas in 2020 and 2021.	
All new cars and vans in Greater London Authority group fleets, in- cluding response vehicles, being zero emission capable from 2025. All public heavy fleets fossil free by 2030.	

FOSSIL-FUEL-FREE STREETS COMMITMENT	ACTION	
Procure, with our partners, only zero emission buses from 2025.	L.A. Metro has endorsed a goal of a fully zero-emission bus fleet by 2030, which means all bus pro- curements moving forward will be electric. Metro has already started	towards this goal with the recent procurement of 100 electric buses. LADOT will procure only electric buses starting in 2025.
Ensure that a major area of our city is zero emission by 2030. OTHER SUPPORTIVE ACTIONS	As part of the Sustainable City pLAn update in 2018, L.A. will analyze candidates for a zero-emission area	based on air pollution benefits, ac- cessibility of public transportation, and other considerations.
Transform our cities through peo- ple-friendly planning policies.	The Vision Zero Los Angeles plan focuses on people and pedestrian safety throughout the City. The May- or's Great Streets program seeks to activate the public realm with peo- ple-friendly programs, including the community-driven Challenge Grant program. The LADOT People Street program installs pedestrian	plazas, parklets, and bicycle corrals throughout the City. The Depart- ment of Public Works is committed to invest \$1.4 billion over 30 years to fix sidewalks around the City and make them accessible to everyone. The Sustainable City pLAn has a fo- cus on creating a more liveable city.
Increase the rates of walking, cy- cling and the use of public and shared transport that is accessible to all citizens.	The citizens of L.A. approved Measure M, a permanent half-cent sales tax that will enable Los Angeles to complete a comprehensive, world-class transit system stretching across all of the L.A. region.	L.A. Metro launched a bike share last year in Downtown L.A. and has al- ready expanded to Pasadena, the Port of Los Angeles, and Venice Beach. More plans are in the works to expand the bikeshare system further.
	Measure M will provide \$120 billion in funding over the next 40 years to ac- celerate current rail construction, add new lines, create connector lines for an improved, more usable transit network, and expand bike share across the re- gion among other mobility projects.	tion's first ever low-income EV car- share program - BlueLA. It offers low-income residents the ability to participate in a zero-emission car- share program.
	The Passage of Measure M will also ensure that the L.A. River bike path	LADOT is exploring micro-transit to better serve citizens in harder to reach areas. The department's active trans-

zero emission buses from 2025.

Procure, with our partners, only We commit to work with our partners to procure only zero emission buses from 2025 at the latest.

ACTION

In the City of Madrid there are already 47 electric buses on the road. We are going to buy 668 electric buses by 2027. This was decided by city council in September 2019, as part of the Madrid360 Strategy. During this time, we will evaluate different technologies to inform investment in clean energies such as hydrogen or more electric buses.

Ensure that a major area of our city is zero emission by 2030.

We will work with C40 and their network of cities to design and develop our plan for a major area of Madrid to be zero emission by 2030. We will start with Puerta del Sol

Area, next year. Puerta del Sol is in the centre of Madrid city and one of the places most visited during the year and overall at Christmas time. During next year we are going to study zero emission areas in all districts of Madrid. We will focus on part of Fuencarral street, and access to Retiro Park.

This has been decided and announced by our Mayor in September 2019 in the new Strategy Madrid360.

OTHER SUPPORTIVE ACTIONS

Transform our cities through people-friendly planning policies.

We have started to work on a new sustainable, secure and safe plan for mobility for the next year (2020).

Also, we are going to evaluate all the cycling cross section lanes, to improve security and continuity in the new cycling lanes. We are going to plan new cycling park areas.

Also, we are going to build new infrastructure to improve congestion as part of the Nudo Norte improvement. The investment for this infrastructure is about 65 M€. For the prolongation of Madrid Rio (the A5 motorway), 4km of the motorway will be underground. The surface of this area is going to be a big park continuing the Madrid Rio Park. We are going to invest near 200 M€ in this important infrastructure.

Increase the rates of walking, cycling and the use of public and shared transport that is accessible to all citizens.

We have announced an update of the Cycling Directorate Plan. We are going to continue building new cycling lanes. On the 27th November 2019 the plenary of the city approved the building of a segregated cycling lane in Paseo de la Castellana, it is a 8 km cycling lane in the most important street of our city.

Also, we are going to build new cycle lanes in the south areas of Madrid to let citizens from the south to take advantage of this kind of infrastructure.

We are going to build 14 park and rides near public transport stations to dissuade people from using private cars and to promote the use of public transport. The investment into this park and ride is near 150 M€.

There is planned a new urbanism development in the north of Madrid called "Madrid Castellana Norte". This new development will change this area in a more sustainable way. In this new area, there are planned two new public transport lines, one metro and one train, and new transversal connections that will help the congestion in the north of Madrid. There are designed residential areas and also business areas with more space for people, bicycles and gardens.

Also, there is planned a new urbanisation area in the Real Madrid Football stadium area. They are going to re-urbanise the area in a more sustainable way, with more space for people and less private cars.

We are going to develop new urbanization areas in the south of Madrid with the same guidelines that we have explained in the urbanizations of the north of the city.

These park and rides will be free for citizens who use public transport. We will improve the frequency of public transport in peak hours and develop intermodal areas including with scooters, car sharing areas, carpooling areas, cycling hiring and

so on Also, in collaboration with the regional transport authority we are going to build new metro lines and a new intermodal station.

Next year the city of Madrid has approval in collaboration with central government and the regional government for the building of a new BUS-HOV (high occupancy vehicle) access road in the A2 motorway. We are negotiating new BUS-HOV in other important motorways as the A-42, A-3, and so on. Finally, we are going to use data systems and apps to offer better consumer information about all the transport modes available in Madrid.

Reduce the number of polluting vehicles on our streets and transition away from vehicles powered by fossil fuels.

We are implementing an incentives program for cleaner technologies for road polluting private vehicles. A €180 million funding program, will be implemented to replace polluting vehicles by more efficient, clean technologies, as follows:

€25 million per year for private drivers changing their "A" vehicles (the highest polluting vehicles).

€10 million per year for urban logistic operations fleet.

€5 million per year for the complete taxi fleet renewal.

€5 million per year for buses.

Lead by example by procuring zero emission vehicles for our city fleets as quickly as possible.

Through the Air Quality and Climate Change Plan of Madrid, different measures have been taken to reduce emissions of air pollutants and greenhouse gases, through procurement of zero emission vehicles for the city fleet. These include:

- Renovation of the municipal bus fleet (Public Transport Company EMT). During the years 2016-2019 the municipal bus company has procured 47 electric buses. In the following years, it will also multiply the number of electric vehicles by ten. In 2023 the fleet will have over 200 electric buses; by 2027 an additional 400 will be incorporated. In total, the EMT electric bus park will increase from 47 vehicles to 668 in eight years. In addition, Madrid plans to open a new specific Operations Centre specifically designed for charging and repairing electric buses.

- Renewal of the Municipal Fleet through the incorporation of low emission vehicles, primarily Zero Emissions. During the years 2016-2019, more than 330 electric vehicles have been incorporated to replace combustion vehicles, which cover the different municipal services. 270 charging points have been installed in more than 60 municipal buildings and facilities to provide electric charge for these vehicles.

operators and businesses to accelerate the shift to zero emissions vehicles and reduce vehicle miles in and is expected to increase to 100 our cities.

Collaborate with suppliers, fleet Madrid is deploying a public access fast charging network, which is now integrated with 50 rapid chargers chargers by the end of 2020.

> The municipality has collaborated with car and moto sharing operators, in order to encourage the use of zero emission vehicles in their fleets. 10 private companies are operating now in Madrid city with over 2.500 electric cars and more than 5.100 electric motorcycles

ple-friendly planning policies.

Transform our cities through peo-

shared transport that is accessible to all citizens.

The Climate Action Program 2014-2020 contains the following actions for people friendly planning policies: • Increase and rehabilitation of green areas in the city.

Rehabilitation and recovery of Public Space.

 Introduction of intermodal mobility schemes in strategic areas of the City. Introduction of the integrated transport card. 3 massive bike parking facilities in strategic subway stations. Connectivity of ECOBICI with BRT and Subway System.

The Climate Action Program 2014-2020 contains the following actions to increase walking and cycling in the City:

· Introduction of intermodal mobility schemes in strategic areas of the City.

• Expansion of Mexico City's public bike share system ECOBICI. ECOBICI Phase IV (2015). Introduction of 171 new stations, over 2,500 bicycles in 21 new neighborhoods. ECOBICI expansion (December 2017). Introduction of 28 new stations for electric bikes in 13 new neighborhoods.

• Bicycle Schools

Comprehensive Mobility Program 2013-2018.

Inspection and Maintenance Program · The Program applies to all motor vehicles registered and / or circulating in the territory of Mexico City, and those that carry metropolitan license plates.

• According to the emission level of the vehicles, they are not allowed to circulate in the city during one or two days a week.

Green and Healthy Streets

• Introduction of BRT corridors: Line 5: 10km; Line 6: 20km; Line 7: 15 km (first line with double deck buses Euro VI)

The Comprehensive Mobility Program 2013-2018 introduces the new Mobility Paradigm for Mexico City, it puts people at the center of mobility planning. This way, pedestrians are the highest priority in the usage of the road, followed by cyclists, public transport, freight and finally private vehicles.

• One of its main objectives is to ensure a comfortable, efficient,

accessible and safe circulation of people on public roads, giving priority to pedestrians, cyclists and users of public transport, through the development of a network of "Complete streets" in primary roads, as well as the pacification of the traffic and ordering of the secondary streets, with adequate maintenance and signage.

Pedestrian safety Program "Pasos Seguros"

•The program contemplates the implementation of high-impact rapid interventions in more than 50 intersections grouped in 6 corridors, identified as high risk for pedestrians because of the high incidence of traffic events they present.

• Complete information about the emission levels for Stickers "00", "0", "1" and "2" is available at http://www.sedema.cdmx. gob.mx/programas/programa/ verificacion-vehicular

· Electric vehicles are exempt. Complete list of exempt models is available at http://www.cms. sedema.cdmx.gob.mx/storage/ app/media/listadovehiculoscandidatosahologramaexento.pdf

Lead by example by procuring zero emission vehicles for our city fleets as quickly as possible.

Electric and Hybrid taxi fleet. On March 2017, Mayor Mancera announced a measure that establishes that all taxis from 2007 or older must be substituted by electric or hybrid vehicles. The measure will be applied starting on December 31st, 2017. In order

to implement the measure, Mex-

ico City Government introduced

100 hybrid taxis and will give

an incentive of \$50,000 MXN

(\$2,662 USD) to taxi operators so they can renew their fleet.

Zero Emissions Corridor Eje 8

Mexico City will introduce the first Zero Emissions Corridor with 100% Electric Buses on Eje 8, which will connect the South of the City from east to west. The corridor will have a fleet of 90 electric buses.

Collaborate with suppliers, fleet operators and businesses to accelerate the shift to zero emissions vehicles and reduce vehicle miles in our cities.

The Government of Mexico City, through the Ministry of the Environment (SEDEMA), carries out different actions aimed at reducing the levels of pollutants in the air on a permanent basis, from both fixed and mobile sources. One of them is the Environmental Self-Regulation Program for diesel vehicles.

This program promotes in commercial and public passenger transport companies the establishment of preventive maintenance programs and the installation of high-efficiency emission control systems, such as particle filters, to keep their units 52 percent below the indicated limit in Official Mexican Standard NOM-045-SEMARNAT-2006, which establishes the maximum permissible limits for this type of vehicles.

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT

- Within the framework of the SUMP, the City of Milan has already committed (among others):
- EUR 2 billion to enhance the public transport system (underground, railway, surface)
- EUR 57 million to implement new 30 km/h areas and low speed roads
- EUR 145 million to develop the bicycle and pedestrian mobility
- EUR 166 million to increase the road safety
- EUR 100 million to bring down barriers to the public mobility services accessibility
- Moreover, the City Council of Milan has already planned, or is planning: - EUR 5 million to implement a Low Emission Zone covering the whole city and EUR 0.7 million per year for the LEZ management
- EUR 25 million per year to buy electric buses for the public transport system
- EUR 1 million per year for the management of the bike sharing service

By 2024 (SUMP objectives): • bring down barriers to the pub- lic mobility services accessibility: > 75% as for underground network, > 90% as for surface transport system • city's centre will be a 30 km/h zone	 triple the bicycle path network triple the low speed road network cut of more than a third the number of road accidents
By 2024 (SUMP objectives): • car sharing and scooter sharing services: +100% • mean speed of the surface public transport system: increase by 20%	By 2030: • 15 shared bikes per 1,000 inhabi- tants (4 in 2016, 8.5 in 2017)
Number of passenger cars per 1,000 inhabitants: 460 by 2024 (SUMP objectives), 400 by 2030 (currently 505).	Diesel Euro 4 already banned from city's centre, diesel Euro 5 by 2023, diesel Euro 6 by 2028 (private cars) / 2029 (commercial vehicles). His- torical city's centre totally "zero emission" by 2030. Diesel up to Euro 6 banned from the whole city by 2030.

ACTION

Procure, with our partners, only zero emission buses from 2025.

Ensure that a major area of our city

is zero emission by 2030.

Starting from 2021, all new buses procured by the city of Moscow will be electric buses. (The state program of Moscow "Development of the transport system", approved by the decree of the Moscow Government dated 02.09.2011 No. 408-PP.)

The city of Moscow intends to en-

sure a major area of the city is zero

emission by 2030, and will work

with C40 Cities to develop a plan to

deliver this commitment.

By 2032, the car park of the State Unitary Enterprise "Mosgortrans" will consist exclusively of electric buses. (The state program of Moscow "Development of the transport system", approved by Decree of the Government of Moscow of September 2, 2011 No. 408-PP as amended by Decree of the Government of Moscow of August 21, 2017 No. 546-PP).

Increase the rates of walking, cycling and the use of public and shared transport that is accessible to all citizens.

Bike infrastructure ed from scratch in than 430 rental sta bicycles. The length is 573 km, of which lanes, 90 km of lane

Reduce the number of polluting vehicles on our streets and transition away from vehicles powered by fossil fuels..

OTHER SUPPORTIVE ACTIONS

Transform our cities through people-friendly planning policies.

The state program of Moscow "De- velopment of the urban environ- ment", provides the creation of a safe, comfortable, well-maintained, green urban environment, adapted for residents of the city. An improve- ment program is being implement- ed following the principle of pro- gram-targeted planning.	From 2011 to 2018, large-scale mea- sures were taken in the city to cre- ate a new quality of urban areas: the complex development of public spaces, streets, squares, embank- ments, historical, social and sports facilities, park and courtyard areas, main departure roads and territories adjacent to transport facilities (MCC, metro stations) with the modern- ization of engineering and road in- frastructure, as well as a functional planning layout of urban space.
Bike infrastructure has been creat- ed from scratch in Moscow (more than 430 rental stations and 4,300 bicycles. The length of bicycle lanes	2 to 6 fold (depending on the area) due to creation of pedestrian zones in the city centre.
is 573 km, of which 323 km of bike lanes, 90 km of lanes on streets, in- cluding parks - 160 km).	69% of residents use public trans- port in Moscow (data from 2018), the daily passenger traffic increased by 2.5 million trips (since 2010).
The number of cycling tours for the 2018 season was 4.25 million rides on city bikes.	In 2018, 3.15 billion passengers used the Moscow Metro, MCC and com- muter rail transport - 320 million
The program for the development of bicycle infrastructure until 2020 provides for an annual increase in the number of urban bicycles by	more (11 percent) than in 2010, land transport - 1.15 billion passengers, 14% more than in 2010.
the number of urban bicycles by 1000 units and 100 bicycle rental stations.	The average traffic speed increased by 7%.
The pedestrian flow for 8 years (from 2010 till 2018) has grown from	By 2022, we plan to open 57 new metro stations.
Total emissions from motor vehicles decreased by 218 thousand tons compared to 2010.	Over the past 8 years, carbon mon- oxide concentrations decreased 2.2 times, nitrogen oxide - 1.9 times, sul- fur dioxide - 2.3 times, suspended
As a result of the measures taken to develop the transport system, it is possible not only to curb the growth of air pollution, but also to reduce it in a number of indicators.	substances PM10 - 1.5 times. Since 2014, the average annual concentra- tions of nitrogen dioxide near high- ways have decreased by 15%.

Fossil Free 2020

Ruter AS is a common management company for public transport in Oslo and Akershus, and is owned by Oslo municipality (60 %) and Akershus County Council (40 %). Ruter plans, coordinates, orders and markets public transport in Oslo and Akershus. In June 2015 the board of Ruter adopted an ambitious plan whereby Oslo and Akershus will have only low- and zero-emission

buses that run on renewable energy by 2020 and for further developments up to 2025. Ruter's fleet currently comprises some 1,100 buses, 77 per cent of which run on diesel. In the future most of the buses will be electric and have the necessary driving range to be able to cover long distances. Ruter is also considering introducing electric boats on its services on the Oslo fiord. Read more <u>here</u>

Ensure that a major area of our city is zero emission by 2030.

Oslo Car Free City Project In 2017, the first changes in the city centre took place to create more room for a city life where pedestrians and cyclists take precedence over private cars.

An area of approximately 1.3 km2 will be transformed to a better urban environment during the City Council period 2015-2019. In 2017 approximately 300 parking spots have been eliminated. The work continues through the summer of 2018. In total, around 700 street parking spots for private cars will be eliminated.

People will still be able to drive a car to the city centre, but considerably large areas shall be freed up for other needs.

Towards 2019, more streets will go through a change to facilitate for more urban life. The temporary measures will be evaluated before permanent measures will be implemented.

Finally, the climate target for Oslo is to reduce emissions by 95% by 2030. In practice, the entire city area will be emission free.

OTHER SUPPORTIVE ACTIONS

Transform our cities through people-friendly planning policies.

Increase the rates of walking, cycling and the use of public and shared transport that is accessible

to all citizens.

Oslo Car Free City Project. The primary focus is to improve city life, and reducing traffic from private cars is used as a means to achieve this. Freed areas previously occupied by cars can be used by the municipality, organisations, businesses and inhabitants for everything from outside dining, culture activities, art,

Biking shall be safe for adults and children alike. The network of bike roads will become more coherent and accessible. This will allow a larger share of the population to use and enjoy the bike as a means of transportation. The City Government has given increased attention to keeping well-maintained bike roads and lanes throughout the year to improve security and accessibility. 60 kilometres of bike roads/lanes will be built on a network of prioritised stretches. The target is to increase the share of bikers to 25 per

cent by 2025.

Reduce the number of polluting ve-Oslo is gradually hicles on our streets and transition number of polluting away from vehicles powered by streets. First of all, th fossil fuels. toll ring has contrib

• Oslo's climate and energy fund is set up to support private individuals, households and private business to help speed up the transformation to a zero-emitting city. It's current value is 315 million NOK (approx. 38 million USD).

bicycle stands or playgrounds. Everyone in Oslo is invited to provide their input into the design of the city: free-time clubs, culture groups, businesses, restaurants, elderly as well as youth, people that are living, visiting and working in the centre.

To reach the goal of reducing car traffic by 20% before 2020, and one-third by 2030, the proportion of passenger transport covered by public transport, cycling and walking must be increased considerably while demand for transport must be reduced. These considerations are chiefly guiding land use planning, transport planning and infrastructure investments for the city of Oslo.

Oslo is gradually reducing the number of polluting vehicles on its streets. First of all, the new designed toll ring has contributed to a reduc- tion of car traffic in Oslo of approx. 5 % from 2017 to 2018. A new inner toll ring in 2019 is expected to con- tribute to an additional reduction of car traffic. Commute charges in the toll ring favour zero and low emis- sion vehicles, motivating a transition	to cleaner vehicles. Other measures, first of all a strong commitment to establish electric charging infra- structure, along with favourable na- tional taxation, now shows that 60 % of new cars sold are either electric or plug- in hybrids. Oslo will contin- ue to develop measures to secure sufficient charging infrastructure so that we reach our targets.
56 % of the City car fleet (light vehicles) is electric. 31 % of the heavy vehicles (more than 3500 kg) run on	biogas or other renewable fuel. The target is that the total vehicle fleet shall be fossil free by 2020.
Through our network "Business for climate", with 90 partners, we focus on the shift to zero emission vehi-	a support scheme for the businesses in Oslo that will shift from fossil cars to electric cargo-bikes.

C40

FOSSIL-FUEL-FREE STREETS
COMMITMENT

ACTION

Procure, with our partners, only zero emission buses from 2025.

Oxford City Council is committed to work with the privately owned bus companies that serve the city to transition to zero emission buses from 2025. We will work with operators to identify sustainable finance

models for electric or hydrogen fuel cell buses, and introduce policies and incentives in the city to facilitate transition to zero emission buses.

Ensure that a major area of our city is zero emission by 2030.

The City Council in partnership with the County Council (transport authority) are proposing a Zero Emission Zone which will impact the city centre streets from 2020 in 3 stages. This will impact traffic in a city that is relatively small. In geographic terms it is modest but its impact will be wide.

OTHER SUPPORTIVE ACTIONS

Transform our cities through people-friendly planning policies.

People-friendly planning policies are at the centre of Oxford City Council's Local Plan 2036 which was published in August 2017. The development of the Local Plan is currently entering its final stages.

Increase the rates of walking, cvcling and the use of public and shared transport that is accessible to all citizens.

The City Council encourages cycling in Oxford and has recently elevated it to a major policy portfolio on its City Executive Board. In July 2017, new signs proclaiming Oxford as a cycling city were installed on all 11 roads entering the city centre. The aim is to remind motorists to be more aware and respectful towards cyclists, and set a statement of intent for the city. 25 per cent of all commuter journeys are made by

bike within Oxford.

Under its 'Park and Pedal' initiative, the City Council recently installed 70 cycle parking spaces at Redbridge Park and Ride and 40 spaces at Seacourt Park and Ride to encourage 'last mile' and 'first mile' cycling by motorists using the city's park and rides.

Reduce the number of polluting vehicles on our streets and transition away from vehicles powered by fossil fuels.

Lead by example by procuring zero emission vehicles for our city fleets as quickly as possible.

hicles and reduce vehicle miles in

our cities.

Collaborate with suppliers, fleet EV Summit, Oxford City Council operators and businesses to accelerate the shift to zero emissions ve-

vehicles.j

partnered with Green TV to host the Oxford EV Summit 2018. The two-day summit brought together leaders and key players working on electric vehicles and charging infrastructure to explore the opportunities, and the barriers, on the road towards full electro mobility.

The goal was for participants to gain cutting edge insight into electric vehicle development and to learn what is needed to overcome barriers to electric vehicle uptake. The event focused on supporting and encour-

Oxford City Council and Oxfordshire County Council are proposing to introduce the world's first Zero Emission Zone in Oxford city centre. The proposal would see diesel and petrol vehicles banned from Oxford city centre in phases, starting with some vehicle types and a small number of streets in 2020, and - as vehicle technology develops - moving to all vehicle types across the whole city centre in 2035.

The Zero Emission Zone proposals would cut the nitrogen dioxide level in Oxford city centre's most polluted street, George Street, by 74% by 2035 - bringing it well below the legal limit.

A recent Energy Saving Trust Plugged in Fleets report made the financial and environmental case for Oxford City Council to buy more electric vehicles into the pool fleet and we currently have 17 electric vehicles in our fleet, along with 9 electric bikes and 22 hybrid electric

We are proud to be one of the first organisations in the UK to receive 'Go Ultra Low Company' status. The newly launched initiative recognises businesses that are embracing electric vehicles (EVs) as part of a new

scheme run by government and automotive industry campaign, Go Ultra Low.

We have been awarded 'Go Ultra Low Company' status in recognition of how plug-in cars and vans form an increasingly important part of our fleet. The accolade also recognises our commitment to boosting their uptake over the next five years as part of our long-term transport strategy.

aging practical actions to implement policy, access finance, change attitudes, and accelerate technology improvements.

ACTION

Procuring, with our partners, only zero emission buses from 2025.

No diesel bus has been bought since 2014: only hybrid, natural gas and electric. The transport operator RATP has a plan to achieve the goal "Zero emission fleet in 2025".

Ensure that a major area of our city is zero emission by 2030.

ACTION

Procure, with our partners, only zero emission buses from 2025.

From now until 2025, it will be increasingly required to introduce electric bus fleets. We will begin the transition to electric buses incrementally before 2025 within our existing bus fleet. After 2025, all new operation contracts signed between the operators and MDMQ - the municipality of Quito - will require only electric bus fleets. Additionally, the MDMQ will install charging stations or assign spaces for their installation by private companies.

In particular, this goal can be rapidly implemented in the BRT corridors of the Public Company for the Transportation of Passengers. The renovation of municipal fleets in the future should only include electric buses, and in the case of trolley buses, they can be repowered to then operate without using diesel motors.

Ensure that a major area of our city is zero emission by 2030.

Towards 2030, the MDMQ will establish the historical city centre as zero-emission zone. This can be achieved by making the majority of the center pedestrianised and allowing only the traffic of electric vehicles. Other zones can also be established as zero-emission, especially those where new urban development projects are taking place: this can be implemented through the corresponding by-laws.

OTHER SUPPORTIVE ACTIONS

Transform our cities through people-friendly planning policies.

Increase the rates of walking, cycling and the use of public and shared transport that is accessible to all citizens.

Reduce the number of polluting vehicles on our streets and begin the transition away from vehicles powered by fossil fuels.

Lead by example by procuring zero emission vehicles for our city fleets as quickly as possible.

Collaborate with suppliers. fleet The policy is oriented operators and businesses to accelerate the shift to zero emissions vehicles and reduce vehicle miles in our cities.

port fleets and alte transport. We will citizens the rationalisation of the use of private cars and its participation in

After the signatur and Healthy Street working group with nicians, bus operate panies and NGOs. ITDP, was established. The working group plans to: model the economic viability of introducing e-buses on the conventional and BRT systems; promote interest amongst

The City of Rio de Janeiro is cur- rently developing its Sustainable Development Plan. The <u>DECREE</u> <u>46.078/2019</u> establishes the city sustainable development policies, the Integrated Planning and Sus- tainable Development Committee and the guidelines for the concep- tion of the Sustainable Develop- ment Plan (which is currently under development).	The City Sustainable Development Plan will guide city's actions in the long term to 2050, and a plan of ac- tion and targets for 2030.
The city of Rio established in 2019 its Sustainable Urban Mobility Plan (DECREE 45.781/2019) which de- fines the city's municipal transport priorities and objectives including: I - encourage the systematic use of public and active transportation; II - prioritize areas for the implemen- tation of mobility infrastructure. III - promote the integration be- tween the metropolitan area trans- portation networks;	 IV - operationalize the execution of federal, state and metropolitan policies; V - transpose the city's geographical barriers; VI - promote an integrated information system focusing on active and public modes; VII - strengthen social participation.
Preliminary studies are in place for the implementation of the Urban Space project that includes the con- cepts of healthy cities, smart cities and walkability.	
COMLURB, waste management company, has contracted, through public tenders, the leasing of 18 electric garbage truck vehicles with a collection capacity of 15 cubic me- ters of waste, that will be used for household collection only, which will be put into service during 2019. 8 of	these vehicles are planned to go into operation in September 2019. Since 2018, health services waste collec- tion from municipal units has been carried out by two (2) electric vans.
After the signature of the Green and Healthy Streets Declaration, a working group with City Hall tech- nicians, bus operator, energy com- panies and NGOs, such as C40 and	the operators; deploy an e-bus pilot and monitor performance; assess viable routes for the deployment of e-buses; define terminals to be con- verted to electric; negotiate elec-

tricity rates with utility companies; and participate in extended knowledge-sharing activities through the Zero Emission Bus Rapid Accelerator (ZEBRA) project.

ACTION

Procure, with our partners, only zero emission buses from 2025.

Ensure that a major area of our city is zero emission by 2030.

to procure only zero-emission buses from 2025

Rome, together with its main mo-

bility partner (ATAC), is committed

By 2030, the area within the historical city centre (defined as the limited area of 5 km²) will be a zero emission zone.

OTHER SUPPORTIVE ACTIONS

Transform our cities through people-friendly planning policies.

The current city administration has identified the following actions in order to improve public transport:

• Intelligent traffic lights, priority to public transport services, automatic license plate recognition poles, cooperative intelligent transport system as well as info-mobility systems to rationalize both public and private transport systems with already 15 Million € allocated (investment plan 2018-2020)

• Improvement and extension of Park & Ride locations, increasing their security. Integration of inter-modality hubs with cycling parks and multi-sharing hubs with already 30 Million € allocated (investment plan 2018-2020)

• New bus lanes in order to increase the public transport's commercial speed (+40% by 2021)

Rome's Sustainable Urban Mobility Plan (SUMP) will be completed with a participatory bottom-up approach. It already identifies the most urgent actions, in line with safety, sustainability, accessibility and cost-effectiveness national guidelines. The SUMP also foresees significant extension of tram and metro networks as well as the implementation of metro cable networks.

Increase the rates of walking, cycling and the use of public and shared transport that is accessible to all citizens.

Reduce the number of polluting vehicles on our streets and begin the transition away from vehicles powered by fossil fuels.

Lead by example by procuring zero emission vehicles for our city fleets as quickly as possible.

in Trastevere. The g a widespread servi Collaborate with suppliers, fleet The administration

operators and businesses to accelerate the shift to zero emissions vehicles and reduce vehicle miles in our cities.

the first Electric Mol city. At least 700 chargin will be available by 2020 (currently 112).

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT

• To make this vision a reality the Mayor has already allocated more than 200 million, partly funded by European funds (ERDF, national and regional funds complemented by H2020 R&S projects). Rome's Sustainable Urban Mobility Plan will be approved over the next months, allocating the necessary resources to provide the city with a high rate mobility system like other leading European Capitals.

• From 2021 pedestrianisation schemes, footpaths, walkways and cycle routes will be realized in all City Districts, leading to a complete traffic scheme redevelopment.	•In September 2016, the administra- tion has defined new market rules in order to encourage sharing mobility, with economic incentives favoring electric vehicles.
 Increase of 50% of new cycling routes by 2021, also to connect suburbs to the city centre. In particular, the administration is developing the "GRAB", a cycling ring surrounding the downtown (nearly 45 km). By 2019 a new bike sharing service will be provided. The free flow scheme will be extended to cover the entire city with a bicycle hire point in train stations by 2021. 	•Since July 2017 Rome assembled the "Consulta Cittadina" a Consul- tation Commission for Road Safety, Soft Mobility and Sustainability, to promote dialogue and collaboration between public and private subjects with all the relevant road-safety stakeholders, especially victims as- sociations. The strategic objectives are to reduce by 50% the number of deaths by 2020 and by 35% the number of serious injuries caused by road accidents in Rome.
•The administration is working on the new urban logistics and delivery goods plan, especially focusing on urban goods distribution, including loading and unloading systems to favor last-mile operations with sus- tainable vehicles by 2021.	
Over the coming years a strong pol- icy of private mobility reduction and an extraordinary plan for re-launch- ing public transport is expected. The historical city centre will be off limits to tourist buses by 2019. At the same time, new parking areas are expected as well as new limited traffic zones to be implemented by 2020.	Euro 0 vehicles (petrol and diesel fuel) Euro 1 (petrol and diesel fuel) and Euro 2 (diesel fuel) are already banned from the "Area verde/Green area" zone, a restricted area be- tween the city centre and the ring road of Rome.
A tender was run on April 2018: Rome is going to restore sixty elec- tric minibuses housed in the depot in Trastevere. The goal is to rebuild a widespread service in the centre	of Rome that was interrupted some years ago, aiming to improve it, and permitting the decrease the of CO2 and NOx emissions in the heart of the city.
The administration has approved the first Electric Mobility Plan for the city. At least 700 charging stations	

ACTION

Procure, with our partners, only zero emission buses from 2025.

the primary decision making power in the procurement of zero emission buses. The Metropole Region of Rotterdam The Hague (MRDH) is in charge. In 2016 already the MRDH took the initiative to reach agreement on zero emission buses: from 2025 all new buses and from 2030

The City of Rotterdam does not have

all buses. The path of the local transport company RET towards zero emission busses is as follows: 2019: 55: 2021: 50: 2024: 50: 2029: 110

See here (in Dutch)

Ensure that a major area of our city is zero emission by 2030.

Green Deal Zero Emission Citylogistics: in 2025, the transport and logistics sectors will no longer be allowed to emit harmful gases in the centre of Rotterdam.

OTHER SUPPORTIVE ACTIONS

Transform our cities through people-friendly planning policies.

For a decade we have been transforming the urban space in our city centre toward a pedestrian (and bicycling) friendly environment. This transition is called 'the City Lounge'. At this moment we are reconstructing the main street in our centre (Coolsingel) into a more pedestrian friendly design.

Increase the rates of walking, cycling and the use of public and shared transport that is accessible to all citizens.

Rotterdam is a walkable city. We are creating an agenda where Rotterdam explicitly prioritises the promotion of the pedestrian, ranging from practical, fun, recreational and sport in the context of health. In 2019 Rotterdam will host the international event Walk21. We consider that Walk21 will give all walking actions a boost.

In the last years the city of Rotterdam has been actively promoting our cycling plan 'Priority for Cycling' (2016-2018) and have implemented a considerable number of measures. Measures that make us distinctive and that we hope will inspire others. Measures that are going to make Rotterdam the ideal cycling city. Together with many partners in cycling and transport, with cyclists and potential cyclists, with residents and commuters, with businesses and relevant stakeholders, we have achieved our main goals in 2018: - More space, comfort and speed

for cyclists; -10% more cyclists (compared by in the innercity; clists.

The cycling plan 'Priority for Cycling' (2016-2018) is based on three main aspects: cycling routes/network, bike parking facilities and stimulating/promoting the use of the bike.

Currently we are working at a new cycling strategy & plan for the period 2019-2022. This new plan has to contribute to the next step the city of Rotterdam is willing to make: a mobility transition towards more public transport and cycling. Important themes are increasing bicycle use, anticipating the growth of citizens in the city, solutions for the first & last mile by public transport and contributing to topics as livability, sustainability, climate, health, economics and accessibility. This means that we have to invest in more bike parking facilities and the cycling network, make choices for the bike instead of the car, redefine our cycling design standards, anticipate safety issues & new light fast transport modes, and keep improv-

2014) at our main cycling routes

- A higher appreciation from cy-

ing the bicycle use in cooperation with the local community.

In Rotterdam we have different kinds of shared mobility such as car sharing, scooter sharing and scooter sharing. To increase shared mobility that is accessible to all citizens we stimulate different kinds of shared mobility initiatives:

The main policy about shared mobility is anchored in the "Rotterdamse mobiliteitsagenda", "Parkeerplan Rotterdam", "Stedelijke Verkeersen Vervoerplan Rotterdam" and "Beleidsregeling parkeernormen voor auto en fiets". There is also policymaking for bike sharing and car sharing to insure the financing for the programs to stimulate shared mobility.

- We stimulate different kinds of shared mobility:

• Different car sharing companies (classic, one way, peer to peer and private persons) Examples: Witkar Rotterdam, Greenwheels, Mywheels, Buurauto, Juuve, Snappcar, BMW/ Juuve, and Share'ngo.

• Scooter sharing: Felix

• Step sharing: Bird

- Green Deal car sharing is an administrative partnership between different governmental organisations, car sharing companies, insurance companies, car rental companies, car manufacturers etc. The main aim is to promote and stimulate car sharing and to increase the number of shared cars.

- We also have a City Deal for electronic mobility sharing in city area development. This is also an administrative partnership with two pilot locations in Rotterdam to promote at an early stage shared electronic mobility in house and business area development projects. The pilot locations are Rotterdam Centrale District and Nieuw Kralingen.

- For car sharing we have also two types of parking permits: city-wide permit and parking sector permit.

- To reach our target groups we have a website with all kinds of information about car sharing.

- To stimulate car- and bike sharing we also includes discounts on the parking requirements in our new Parking standard.

Reduce the number of polluting vehicles on our streets and transition away from vehicles powered by fossil fuels.

The City of Rotterdam installs public charging infrastructure. A demand-driven concession model facilitates a dense network of stations to meet the charging needs of all the e-drivers.

Lead by example by procuring zero emission vehicles for our city fleets as quickly as possible.

The City of Rotterdam will gradually transform its fleet completely into electric cars as far as possible in the coming 4-5 years. This does not concern personal cars only, but also the total fleet of operation cars, such garbage collecting truck, logistic distribution cars, etc.

Collaborate with suppliers, fleet ECOSTARS is a European qualifica- a carrier with 5 stars will also enoperators and businesses to accelerate the shift to zero emissions vehicles and reduce vehicle miles in our cities.

tion system for sustainable transport of cargo and people. The City of Rotterdam has been part of the ECOSTARS programme since 2013.Through the ECOSTARS programme, carriers can earn stars for sustainable operations. That often begins with free advice on how to they can conserve (more) fuel. Based on the number of stars, customers can quickly and easily see how clean and sustainable a carrier operates. The maximum score is 5 stars. Besides conservation of fuel,

joy good publicity. As a result, they will be more noticeable to potential customers. Above all, carriers with many stars will have a competitive advantage in the city for assignments commissioned by the municipality.

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT

• A total of 100 million euros is dedicated for the transition to full zero emissions public transport by 2030.

ACTION

Procure, with our partners, only zero emission buses from 2025.

Santa Monica is planning to procure up to 30 electric buses within the next 5 years, as a first step towards procuring only zero emission buses from 2025.

Ensure that a major area of our city is zero emission by 2030.

Santa Monica's Third Street Promenade is a 1/2 mile of car free streets. In 2028, the City will close its municipal airport, eliminating emissions from aviation and making way for a massive community park.

OTHER SUPPORTIVE ACTIONS Transform our cities through peo-

ple-friendly planning policies.

Increase the rates of walking, cycling and the use of public and shared transport that is accessible to all citizens.

The City's Downtown Community Plan, Pedestrian Action Plan and Land Use and Circulation Element have prioritised pedestrian-friendly streetscape and infrastructure to encourage walking, biking and enjoyment of the City's public right of way. The City has established Strategic Goals of which a New Model for Mobility is one. Within the past few years, Santa Monica welcomed the Expo Light Rail, launched a bike share program, and is promoting first- and last-mile options for multimodal lifestyles. EV Action Plan goals - Expand from 90 public chargers to 300 by the end of 2020; increase % of EVs on the road from 2% to 15% by 2025; Multi-Unit Dwelling rebate program; building code requirements for EV charging Santa Monica has an Administrative Instruction which requires staff to evaluate the lowest-emission alternative to conventional vehicles based on function. Collaborate with suppliers, fleet Santa Monica has joined a nationwide effort (Climate Mayors) to collaboratively procure electric vehi-

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT

• The City annually commits 100% of the carbon tax it pays in its corporate operations to fund carbon mitigation and sustainability programs.

Viaduct structures east of the city centre will be removed by 2019 and replaced with a complete street net- work to reconnect downtown with historic communities to the east and south in a new inclusive waterfront district. One of the guiding princi- ples of this transformative project	is enhanced pedestrian and cyclist movement, increasing safety and comfort for people who walk, bike, and take transit.
Continue investments in walking and cycling infrastructure, including Vancouver's bike-share program, which has installed over 115 stations and 1,200 bikes since launching in 2016. Continue improving accessi- bility of existing cycling infrastruc- ture to lower barriers for riders of all ages and abilities.	As of 2016, Vancouver residents made half of their trips by walking, cycling, and transit. 10% of residents cycled to work and nearly a quarter walked to work.
There are over 250 public and pri- vate electric-vehicle charging sta- tions throughout Vancouver. We will build a holistic charging network and catalyse private-vehicle transi- tion to electric vehicles, by expand- ing home, workplace, and public electric vehicle charging infrastruc-	ture. Over the next five years, Van- couver will deploy an additional 20- 25 fast-charging stations, 40 Level 2 stations, and enable charging at home through curbside charging pi- lots and removing barriers to char- ger installation in multi-unit residen- tial buildings.
Continue low and zero-emission vehicle procurement, fleet right-sizing, and route-planning/dispatching upgrades for City-owned fleet. Vancouver currently maintains one of the largest zero-emission municipal fleets in Canada, with 33 electric and 59 hybrid vehicles. We have an	overall fleet GHG reduction target of 30% from 2007 levels by 2020, and a procurement target of 115 electric vehicles, 112 hybrids, 60 compressed natural gas vehicles and continued use of B20 bio-diesel.
Create a green enterprise industrial zone to foster co-location, circular economy, and fleet sharing amongst businesses. Work with business community to promote and support	distances driven. Vancouver's Green and Digital Demonstration Program uses City infrastructure as demon- stration platforms for pre-commer- cial clean-tech, including low-/ze-

ro-emission transportation.

FOSSIL-FUEL-FREE STREETS COMMITMENT	ACTION		
Procure, with our partners, only zero emission buses from 2025.	Warsaw has a fleet of 31 battery electric zero emission buses on the road and will have 161 zero emission buses by 2020. In addition to this, Warsaw plans to join the Global Covenant of Mayors on Climate and Energy in 2018 and subsequently	adapt a Sustainable Energy and Cli- mate Action Plan. It will contain pol- icies regarding this commitment.	Reduce the number of polluting ve- hicles on our streets and transition away from vehicles powered by fossil fuels.
Ensure that a major area of our city is zero emission by 2030.	Warsaw plans to join the Global Covenant of Mayors on Climate and Energy in 2018 and subsequent- ly adapt a Sustainable Energy and Climate Action Plan. Through this we will develop policies to deliver against this commitment.		
OTHER SUPPORTIVE ACTIONS			Reduce the number of polluting ve- hicles on our streets and transition away from vehicles powered by fossil fuels.
Transform our cities through peo- ple-friendly planning policies.	-Revitalisation programme of Pra- ga districts of Warsaw (2nd stage for years 2015-22, next stage being planned);	-Enhancing new Warsaw Housing Policy until the year 2030 with the Warsaw Housing Standard (includ- ing also provisions on energy effi- ciency, renewable energy and EV	
	- Creation of Warsaw Social District (also taking into account a need for EV charging infrastructure in this	charging infrastructure for build- ings).	Collaborate with suppliers, fleet

area);

Increase the rates of walking, cycling and the use of public and shared transport that is accessible to all citizens.

> - USD 93 million). Further electric buses (exact number to be established) are to be procured due to

operators and businesses to accelerate the shift to zero emissions vehicles and reduce vehicle miles in our cities.

Collaborate with suppliers, fleet The City of Warsaw is a participant of the Polish national programme (coordinated by the National Centre for Research and Development NCBiR), in which municipalities and

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT

• USD 1014 million - total funds dedicated for low emission and zero emission transport up to 2020. USD 93 million - total value of the project on 130 electric buses with associated infrastructure, including 19 aerial chargers. Total funding for the next period is yet to be determined, but should be at least comparable, while most probably increased.

Actions resulting from the Warsaw Sustainable Transportation Strategy, which include, among others: - Further development of successful city bike system Veturilo (currently 355 stations with 5147 bikes, includ- ing 100 e-bikes); - Further extensions of 2nd metro line until the year 2022 and planned construction of a 3rd metro line af- ter this date, plus related purchases of new vehicle stock;	 Construction of next tram lines, starting from Służewiec - Wilanów and Grójecka - Dworzec Zachodni, and related purchases of further modern, low-floor trams; Implementation of a city-supported car-sharing system, to be enhanced with electric cars in the next stage of its development.
Actions resulting from the Warsaw Sustainable Transportation Strate- gy and the current Polish national e-mobility programme, which in- clude, amongst others: - Introduction of "clean transport zones" (low emission zones) in War- saw; - Achieving 1000 charging points for passenger cars in Warsaw by the end of 2020 (with the City of War- saw already planning next stages of infrastructure development, with up to 1000 charging points at P & R parking lots by 2030);	 Achieving 30% share of electric cars in the municipal fleet; Achieving 30% share of electric and natural gas vehicles in the fleets performing public tasks for the municipality; Achieving 30% share of zero emission buses performing public transport services for the municipality.
MZA municipal bus operator already	the Polish national programme de-

obtained 31 electric (and 4 hybrid) buses: further 130 electric buses with associated infrastructure to be procured by 2020 with EU co-financing (total value of the project

the Polish national programme described below. However, even without this programme Warsaw would exceed its goals stated in 2015 in the C40 Clean Bus Declaration, which envisaged 130 EV/HEV buses by 2020.

their operators set expectations for zero emission buses. NCBiR on this basis has launched innovative procurement procedures in dialogue with suppliers.

FOSSIL-FUEL-FREE STREETS
COMMITMENT

ACTION

Procure, with our partners, only zero emission buses from 2025.

The West Hollywood Mayor recently joined several regional transit agencies in support of strong action on deploying zero-emission public transit buses and accelerating the transition to 100% electric bus fleets to better serve Los Angeles County communities.

Ensure that a major area of our city is zero emission by 2030.

Plan will establish a strategic roadmap for our commitment to fossil fuel free streets citywide (as one of many initiatives), with a focus on significantly reducing carbon emissions through the continued implementation of walkable, pedestrian-oriented land uses and the promotion of zero emission vehicles

The Pathways to Carbon Neutrality

citywide. It will build upon established zero emission vehicle readiness policies and recent purchases to transition the City's municipal fleet to cleaner vehicles. The intended date of completion of this plan is early 2020.

OTHER SUPPORTIVE ACTIONS

Transform our cities through people-friendly planning policies. At 1.9 square miles, the City of West Hollywood is one of the most compact and densest cities in California in terms of dwelling unit density. The city, has an average Walkscore of 91 (a Walker's Paradise), and is served well by public transportation, sidewalk infrastructure, and bike lanes. The General Plan and Climate Action Plan, adopted in 2011, further facilitate the establishment of mixed-use, pedestrian- and transit-oriented development along the

Increase the rates of walking, cycling and the use of public and shared transport that is accessible to all citizens. West Hollywood ha time proponent modes of transpo successes include:

• Unveiling WeHo P program in August 2 the West Hollywo has pedalled over 2 saved almost 6.5 me emissions from ent sphere.

• Adopting a Pedesi Mobility Plan in 2017 a vision and set of p gies to enhance the be more comfortak viting to pedestriar of all ages and ability

Reduce the number of polluting vehicles on our streets and transition away from vehicles powered by fossil fuels.

In addition to promo transportation option tinues its support of of electric vehicles (

Lead by example by procuring zero emission vehicles for our city fleets as quickly as possible.

As part of its maintenance fleet, the City of West Hollywood currently operates 29 vehicles, 17 of which are hybrid vehicles. As the City installs more zero emission infrastructure, it will continue to modernise its maintenance fleet to zero emission vehicles, particularly as specific electric vehicle types (e.g., full-size pickup trucks and sport utility vehicles) become more readily available.

The City also operates three minibus or trolley transit lines: the CityLine, the CityLineX, and the Pickup. The CityLine and CityLineX operate using a city-owned fleet of five (5) cutaway vehicles. Cityline provides weekday daily service during business hours and on Saturday. In FY 2018, CitylineX had about 23,000 annual boardings and travelled about 26,000 revenue miles. The Pickup is a contracted free weekend trolley (three vehicles), offering limited service at night. The PickUp operates approximately 160 days out of the year and provides 1,640 passenger trips on average each weekend. Ridership has increased by a total of 60 percent since the PickUp's 2014 inaugural year of service.

These vehicles are currently fueled by petroleum, however compressed natural gas vehicles will be placed into service this year. West Hollywood replaces these vehicles every five years. The City is committed to procuring zero emission fleet vehicles as this technology and supporting infrastructure becomes available.

Collaborate with suppliers, fleet operators and businesses to accelerate the shift to zero emissions vehicles and reduce vehicle miles in our cities.

The City of West Hollywood frequently works with local and regional jurisdictions in the Southern California region to promote smart and effective ZEV policies across boundaries. Specifically, West Hollywood will participate in the governance working group for LA County's Transportation GRID Blueprint project—a project that significantly pushes LA County and its 88 cities forward in readying for and supporting EVs in the long-term. The City will continue on similar collaborative opportunities, including forums with suppliers, fleet operators, and businesses to accelerate the shift to ZEVs and reduced VMTs in our cities.

EXAMPLE OF FINANCIAL RESOURCES AVAILABLE TO DELIVER THE COMMITMENT

• Many of the above commitments do not necessarily require direct financial resources for delivery. The City has a dedicated sustainability professional to facilitate its progress in ZEVs and oversee collaborative efforts. As the appropriate vehicle types become available to transition the City's fleet, the Department of Facilities, Parking, and Recreation will add these items to the annual budget request.
