

Application form

This application form accompanies the Healthy, Liveable Cities 'Information for Cities' document, which has all the details about the support offered and the application process.

Deadline for submission: 20th March 2017

1. Name of city:

2. Name of main city contact:

3. Position of main city contact:

4. Department of main city contact:

5. Email of main city contact:

6. Phone number of main city contact:

Healthy, Liveable Cities

The Benefits of Climate Action

7. What support are you applying for?

More than one can be selected. Please note, whilst cities are welcome to apply to both support strands, cities must choose to apply to either (a) direct technical assistance **or** (b) training support but not both.

Our city is applying for:

- Direct technical assistance to collect and analyse health and wider benefits data of walkability and bikeability**
- Healthy and Liveable Cities Gehl Masterclass - designing walkable and bikeable places (training and support)**
- Direct technical assistance to collect and analyse health and wider benefits data of climate action taken to combat air quality**
- Training and support to offer expert advice and inspiration to cities that are planning to implement actions to improve air quality that provide clear climate and health benefits**

8. Please provide us with 3 reasons why you are interested in participating in this project:

9. Please provide a project description:

9.a For **direct technical assistance** - please provide a description of the project your city has already undertaken:

Healthy, Liveable Cities

The Benefits of Climate Action

9.b For training and support - please provide a description of the project your city has resources approved for initiation in 2017 with a rough time estimate for its implementation:

10. Please provide us with a brief explanation of the potential challenges the project will be addressing and how participation in this programme can help advance those challenges:

11. Interdisciplinary working is important for effective climate action therefore cross-sector working is strongly encouraged for all support offered, and for the Healthy and Liveable Cities Masterclass it is essential. Private and/or civic sector partner involvement is also strongly encouraged.

Please list the city departments and organisations involved in the project team and a brief description of their involvement in the action/project:

Healthy, Liveable Cities

The Benefits of Climate Action

12. Please describe the desired impact of the action/project on:

- **Health and carbon** – how will the action/project positively impact health and climate change?

- **Scalability** – how will the action be increased in the future?

- **Equity** – how will the benefits be distributed?

- **Wider citizen engagement is important for effective climate action** - how will you engage citizens in this action/project? Note that citizen engagement is encouraged for all support offered, and for the Air Quality support it is essential.

13. City data

For direct technical assistance, we are looking for data pre-and post-implementation of the action. For training and support we are looking for baseline pre-implementation data and forecast post-implementation targets. *Taking bikeability as an example, available data might include: length, location, map and typology of bike lanes, number of bicycles as part of bike share scheme, users, average number of journeys per day, cost of intervention, etc.*

Healthy, Liveable Cities

The Benefits of Climate Action

Please provide us with a brief list of key data available in relation to the climate action and the potential economic, social, health and environmental benefits:

Thank you for your time!
